

Turkish Spice Pot Concept

Analogue geometric vessel inspired by Anatolian ceramic heritage

Assigned the random prompt 'Peppercorn' for the 'Vessel' brief, I combined research into traditional Turkish relief ceramics with geometric card folding to create a modular, multi-piece spice sharing dish.

Discipline

Ceramic & Form Study

Context

UAL 'Vessel' Brief

Tools

Analogue Drafting, Card Nets

Outcome

A 1:1 modular geometric card prototype featuring seven removable pentagonal outer spice pods surrounding a central peppercorn well.

Ideation — from 'Peppercorn' to modular vessel

Assigned Prompt: 'Peppercorn'

Each student was assigned a random object or process to design for in the ceramic medium. Starting from the peppercorn's spherical form and grinding rituals, I explored stacked spice columns, mortar-and-pestle bowls, and radial star dishes.

01 **Surface Relief** — Translated painted Turkish ceramic patterns into faceted 3D relief.

02 **Radial Symmetry** — Evolved 8- and 7-pointed star geometry into removable individual spice pods.

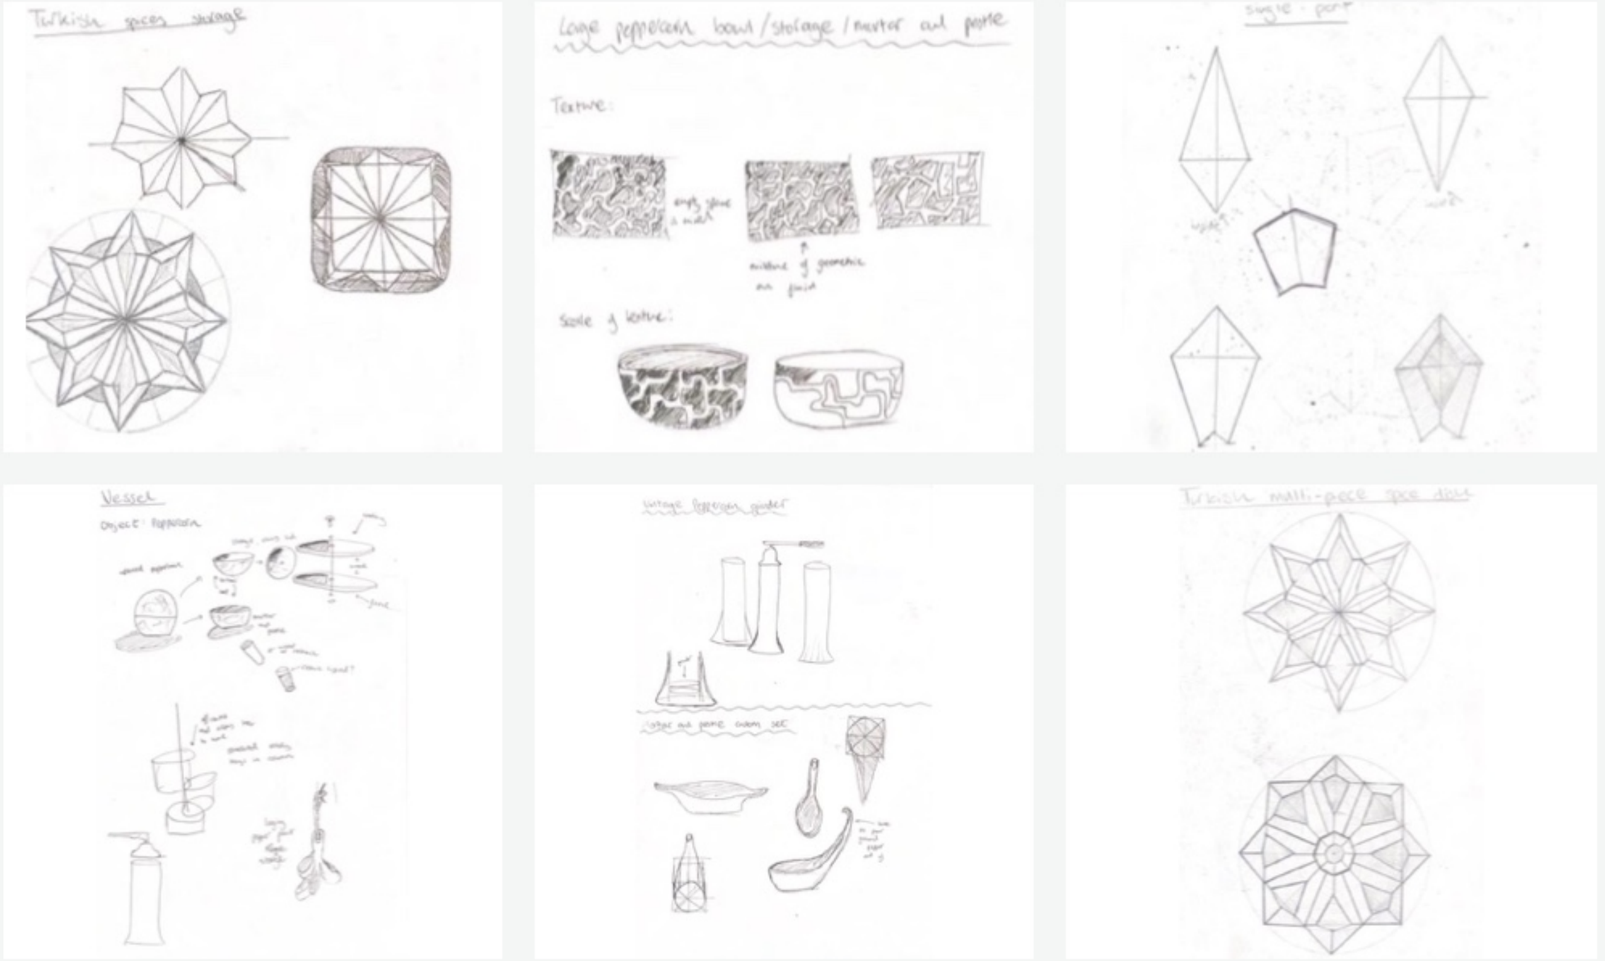

Fig. 01–06 — Initial sketchbook ideation: radial spice storage, ceramic relief texture studies, individual pod nets, grinder mechanisms, and star plans

Cultural & precedent research

Turkish Ceramic Heritage & Functional Vessels

Expanding my investigation from 'Peppercorn' to the wider ritual of sharing spices at the table, I studied traditional hand-painted Anatolian relief bowls alongside industrial designer Roger Arquer's playful condiment vessels.

01 **Traditional Turkish Ceramics** — Analysed radial floral motifs and cobalt/ turquoise glaze palettes from Anatolian bowls.

02 **Roger Arquer — 'Pinch&Grind'** — Demonstrates how a central pestle/grinder can sit surrounded by satellite spice pots.

03 **Roger Arquer — 'Funnel Friends' & 'Nut Hammer'** — Shows how simple geometric forms can guide pouring, pinching, and cracking motions.
